

KADAM PRODUCTION

WEB ECOSYSTEM OVERVIEW

A comprehensive guide to the architecture, core modules, administrative interfaces, and operational flow of the Kadam Production digital platform.

Prepared For: Kadam Production Management Team

Ecosystem Portals: www.kadamproduction.in & app.kadamproduction.in

Date: July 2026

1. Introduction & Ecosystem Overview

The Kadam Production web ecosystem consists of two separate, high-performance web applications designed to deliver a modern, premium experience to visitors while giving managers absolute control over content and notification dispatch.

Unlike traditional template-based websites, this platform is custom-built from the ground up to ensure ultra-fast loading speeds, complete responsiveness across mobile devices, and secure content updates without requiring any technical coding knowledge.

DUAL ARCHITECTURE LAYOUT

- **Main Website (www.kadamproduction.in):** The public-facing site displaying event portfolios, gallery showcases, videos, and contact inquiries.
- **Operational Hub (app.kadamproduction.in):** The central coordination web application designed for order tracking, event categories management, and database synchronization.

2. Section-by-Section Breakdown: Home Page

This section describes every page component on the main public website's Home page, detailing what they include and how they function.

1. Initial Page Loader Screen

When a visitor first opens the website, a fullscreen dark loading page appears. It features an interactive percentage counter (counting from 0% to 100%) overlaying a metallic animated logo of Kadam Production.

How it works: The loader holds the screen temporarily while the browser downloads heavy assets (such as background videos, icons, and page styles). This prevents the page from appearing broken or lagging during load, ensuring a premium first impression.

2. Hero & Brand Showcase Section

The first section visitors see after loading. It includes a full-screen, silent looping video showing live events, a large circular animated logo in the center, and bold slogans: *CREATING ATMOSPHERE NOT JUST EVENT*.

How it works: The background video file is compressed and hosted on Cloudflare R2 to stream instantly without lag. On the left side, hovering icons link directly to your Instagram, WhatsApp, and Email. Large navigation buttons let users go straight to Services or the Gallery.

3. Dynamic Scrolling Marquee Section

Located directly below the Hero section, this features two horizontal rows of styled text tags moving in opposite directions. The top row scrolls left-to-right (e.g. *WEDDINGS, FESTIVALS, CONCERTS*) and the bottom row scrolls right-to-left (e.g. *PRIVATE PARTIES, STAGE SETUPS*).

How it works: A styling loop moves the text infinitely. It provides a visual break and highlights event setups at a glance.

4. 3D Event Stats & Video Reel Section

A sliding display presenting business statistics (e.g. *1000+ Events, 10+ Years of Experience, 500+ Baraat on Wheels*). As each stat card slides into the center, a linked video clip showing that specific setup plays next to it.

How it works: The stats slide automatically every 6 seconds. If a visitor clicks on a specific stat (like "Road Shows"), the video player smoothly changes the clip in real-time to match.

5. Choose Our Vibrants Carousel

A premium sliding slideshow displaying cards for major categories (FESTIVALS, CONCERTS, WEDDINGS, ROAD SHOWS). Each card features a full-cover background image and styled hover scaling effects.

How it works: The cards rotate automatically every 3 seconds. Visitors on desktop can click arrows to slide left/right, while mobile users can swipe across the screen with their fingers.

6. Interactive Photo Gallery (Projects Grid)

A grid of photographs that can be filtered using tab buttons at the top: *All Events, Weddings, Festivals, Concerts, Road Shows*.

How it works: Clicking a category immediately filters the images with a smooth fade-in animation, loading only the photos that match that tag.

7. Footer & Inquiry Section

The bottom of the website containing quick contact buttons (Phone, Email, Surat address) and social media links. It also includes a sticky floating WhatsApp button on the corner.

How it works: Clicking any contact link automatically launches the phone dialer, email app, or WhatsApp chat pre-filled with a request message.

3. Section-by-Section Breakdown: Other Core Pages

This section covers the remaining pages of the public website, detailing their layout and interactive features.

1. Services Page (www.kadamproduction.in/services)

A dedicated page that acts as an interactive catalog for Kadam Production services.

- **Cinematic Showcase Cards:** Large cards detailing your specific offerings (e.g. Wedding videography, Stage lighting, sound setup, DJ show, special entries).
- **Interactive Hover Animations:** Cards scale up and reveal detail overlays when hovered.
- **Integrated Inquiry Trigger:** Each service card has a "Book Service" button that redirects the client pre-configured to WhatsApp or Contact.

2. About Us Page (www.kadamproduction.in/about)

This page shares the history, team vision, and philosophy of Kadam Production.

- **Brand Story Segment:** Details your background, mission statement, and dedication to audio-visual quality.
- **Cinematic Banner Backgrounds:** Backgrounds styled in brand-matching gradients.
- **Interactive Core Values:** Values like Quality, Reliability, and Energy represented in visual cards.

3. Gallery Page (www.kadamproduction.in/gallery)

An advanced, full-screen media wall showcasing high-resolution photos of past events.

- **Live Filtering:** Instant filter tabs (Weddings, Concerts, etc.) that filter elements on-the-fly.
- **Light-box Popup Viewer:** Clicking on any image opens a dark lightbox overlay. Visitors can inspect the photo closely or slide to the next image.

4. Contact Us Page (www.kadamproduction.in/contact)

The dedicated client communication portal.

- **Inquiry Form:** Simple fields allowing users to fill in Name, Phone, Email, Event Type, and Message. Pushes direct notifications to your email.
- **Interactive Map:** An embedded Google Map pointing to Kadam Production's primary office location in Surat.
- **Quick Action Contacts:** Tap-to-call links and direct WhatsApp options.

4. The Administrative Panel

Accessed securely via www.kadamproduction.in/admin, the admin console allows designated managers to control the entire public site in real-time. The interface is visual, utilizing simple buttons and forms.

CORE MANAGEMENT MODULES

1. Gallery & Video Manager

Easily upload new event photographs or list YouTube/Vimeo video links. Managers can drag, reorder, categorize, or delete items instantly. Deleted media files are automatically removed from storage to keep the system clean.

2. SMTP / Outgoing Email Settings

A custom dashboard card that allows you to configure outbound mail channels (SMTP Host, Port, Username, and Password). This powers welcome emails, reset codes, and admin notifications. Includes a test utility to verify email delivery on the spot.

3. Unlimited OTP-Based Credentials Resetter

Securely update your admin username and password without relying on recovery keys. When requested, a secure 6-digit verification code (OTP) is sent to your email. Enter the OTP to finalize your new login credentials instantly.

4. Contact & Profile Controller

Update phone numbers, WhatsApp links, business addresses, and primary emails instantly. Changes reflect globally across the main website immediately.

5. Live Portal Access & Credentials

Below is the reference guide outlining the live web URL locations for your applications and the credentials required to log in to the administrative panels.

A. Web Application URLs

Application Area	Live Website Address
Main Public Website	https://www.kadamproduction.in
Main Admin Dashboard	https://www.kadamproduction.in/admin
Operational Hub (App)	https://app.kadamproduction.in

B. Access Credentials

System Console	Access Username / Email	Access Password
Kadam Production Admin (Main)	admin	Meet@_999
App Kadam Production (Operational)	meetpatel16599@gmail.com	admin123

* Security Note: Keep this document secure. This configuration utilizes direct SMTP verification keys and live administrative accesses. Do not share these credentials with unauthorized persons.
